Professional Summary

Cybersecurity-focused Computer Science Engineering student experienced in penetration testing, digital forensics, offensive security tooling, and high-performance MERN full-stack development.

Education

Muthoot Institute of Technology & Science (MITS) Kochi, Kerala
B.Tech in Computer Science & Engineering — Cybersecurity *2024 – 2028*

Experience

Tech Lead 2026 – Present
MCSC — MITS Cyber Security Club
- Direct technical operations, workshops, CTF events, and offensive security research initiatives.
- Oversee student training pipelines focusing on penetration testing, reverse engineering, and exploitation.

Cyber Security Lead 2025 – Present
Google Developer Groups on Campus (GDG MITS)
- Organize hands-on cybersecurity workshops, technical sessions, and community security tracks.
- Guide community members on cloud security, safe coding practices, and modern web application defenses.

Full Stack Web Developer (MERN) Apr 2026 – Present
GoldMart (Developed under the supervision of Muthoot Group)
- Architect and engineer an enterprise B2B/B2C live auction engine for certified physical gold, bullion, and jewelry assets.
- Implement low-latency bid synchronization pipelines using WebSockets, Node.js, and Express to handle high-concurrency live events.
- Design ACID-compliant, atomic transaction workflows and distributed schemas in MongoDB for tamper-proof audit trails.
- Build responsive, real-time bid monitoring interfaces in React.js with role-based access control (RBAC) and payment gateways.

Junior Tech Lead 2025 – 2026
MCSC — MITS Cyber Security Club
- Led workshops, CTF competitions, and cybersecurity training programs across Linux exploitation and web security.

Main Developer & Maintainer 2026 – Present
Taqwa Fashion Store (Freelance)
- Managed full development, deployment, optimization, and production stability of the e-commerce platform.

Cybercrime Investigation Intern Dec 2025 – Jan 2026
Kerala Police (Cyber Crime Police Station)
- Worked on phishing, financial fraud, and unauthorized access investigations with digital forensics workflows.

Technical Projects

Strimo — Streaming Aggregator GitHub
- Built scalable streaming aggregation platform with scraping pipelines and optimized indexing.

RootMe CTF Platform — Offensive Security Lab GitHub
- Developed multi-category CTF platform with dynamic containerized challenge hosting and exploitation paths.

SDR Monitoring Station — RTL-SDR, GNU Radio GitHub
- Built RF monitoring system for VHF/UHF signal decoding, protocol inspection, and radio frequency analysis.

MITS PRINT — Campus Automation Web App GitHub
- Developed automated campus document queuing and payment system used by students and faculty.

Technical Skills

Cybersecurity:
Penetration Testing, Digital Forensics, Threat Intelligence, Web App Security, Vulnerability Assessment

Programming:
Python, C, JavaScript (ES6+), Bash, SQL

Frameworks & Dev:
MongoDB, Express.js, React.js, Node.js, WebSockets, REST APIs

Security Tools:
Nmap, Wireshark, Metasploit, Burp Suite, Scapy

Systems & Infra:
Linux (Arch/NixOS), Docker, Git, Networking

Achievements & Activities

World Rank 8 — HTB Try Out CTF 2026
- Global Rank 8 with team Obi-LAN in Hack The Box Try Out CTF 2026.

Winner — AI Hackathon (ACM MITS) 2026
- Built CRaaS, a clean-room software recreation SaaS platform.

3rd Place — TECHLETICS 4.0 CTF 2025
- Solved web exploitation, forensics, and privilege escalation tracks.

Open Source Contributor 2022 – Present
- Maintained 40+ repositories and security utility projects.
